Information security solutions

Information security

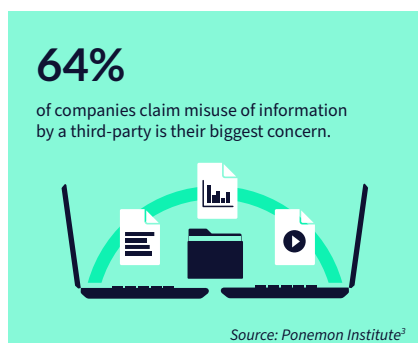

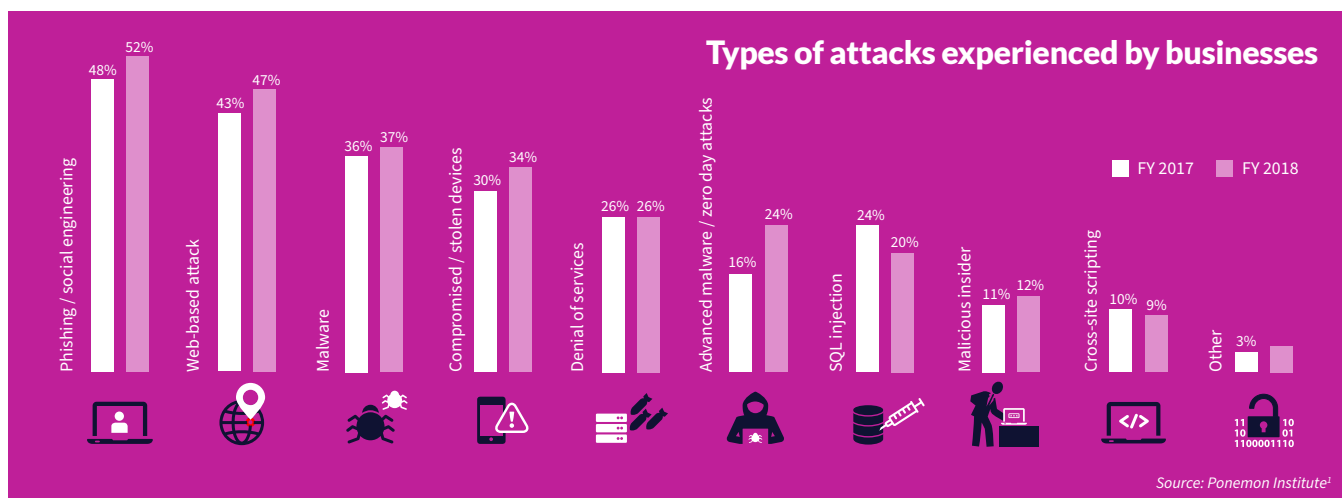

A crucial element of your security ecosystem

For any organisation, information security exists as part of a wide-ranging and complex security ecosystem. If any part of that ecosystem is neglected, it can have a significant knock-on impact that puts your organisation at risk.

The information threat landscape continually shifts and evolves to keep pace with technological advancement. The challenge of keeping your information secure is unprecedented.

Investment in prevention, detection and training is now essential, as is finding a trusted partner help protect your business.

Regardless of size and sector, the threat landscape is changing for all businesses.

Why choose LRQA?

We're here to help negotiate a rapidly changing world, by working with you to manage and mitigate the risks you face. From compliance to data-driven supply chain transformation, it's our job to help you shape the future, rather than letting it shape you. We do this by delivering:

Strategic vision

Our technical know-how, sector expertise and innovative, forward thinking approach will help you meet the challenges of today – and become a safer, more secure, and sustainable organisation tomorrow.

Technical expertise

Our people are sector experts. They bring with them a clear understanding of your specific challenges, standards and requirements – then deploy deep knowledge of certification, customised assurance, cybersecurity and training to help you meet them.

Global capability

Operating in more than 120 countries, recognised by over 50 accreditation bodies worldwide, and covering almost every sector, we can help you manage risk, drive improvement and build credibility with stakeholders around the globe.

Effective partnership

Every business is unique. That's why our experts work with you, to fully understand your needs and goals, and work out how we can best support them.

Fresh perspective

We have led the way in shaping our industry and continue to take every opportunity to collaborate with clients and pioneer new ideas, services and innovation.

Start here. Start now.

Risk based solutions

When it comes to information security, we understand that your organisation has unique requirements. Whether you're a small or medium sized business looking to begin your information security journey or a large enterprise looking for additional levels of assurance – our team of experts will work closely with you to understand your specific needs. This allows us to provide you with a tailored solution designed to address the requirements of your organisation and the industry you operate in.

Real business benefits

Our wide-ranging portfolio of information security services allows us to identify solutions that not only address your specific needs but deliver real business benefits. For example, if you opt for certification against multiple information security standards you could minimise costs and reduce the number of visits to your site. Not only that, you'll be developing a long term relationship with an organisation that already understands your business and ISMS, ensuring your experiences are focussed on what matters most.

ISO 27001

Information security management

An ISO 27001 certified ISMS helps organisations to manage the security of business critical information through the adoption of best practice processes and controls.

All sectors

Information security

ISO 27701

Privacy information management

ISO 27701 certification enables an organisation to demonstrate compliance with privacy and data protection requirements and regulations, such as the GDPR and California Consumer Privacy Act (CCPA). It reduces complexity by integrating with ISO 27001 and helps build trust regarding the management of personal information.

All sectors

Privacy & data protection

ISO 27018

Protection of personally identifiable information (PII) in the cloud

ISO 27018 introduces controls specifically relating to cloud privacy. This supports regulatory compliance and ensures organisations are best placed to mitigate cloud-based security risks.

Cloud service providers

Privacy & data protection

ISO 20000-1

IT service management

ISO 20000-1 certification helps organisations better manage their service life cycle - providing assurance to customers whilst optimising internal processes and productivity.

Managed IT service providers

IT service management

ISO 27017

Information security controls for cloud service providers and their customers

Unlike many standards, ISO 27017 provides controls for both cloud service providers and customers. This helps to make sure that cloud services achieve the same level of safety and security as any other information in a certified ISMS.

Cloud service providers

Cloud security

Cloud service customers

ISO 27011

Information security controls for telecoms organisations

ISO 27011 certification allows telecoms organisations to demonstrate that they have met baseline information security management requirements to address high-risk, industry specific threats and vulnerabilities.

Telecoms

Information security

ISO 22301

Business continuity

ISO 22301 certification indicates that an organisation has a management system in place which protects them against unexpected events and ensures rapid recovery through clear and effective processes. This helps guarantee a consistent level of service.

Business continuity

CSA-STAR

Cloud security

CSA-STAR provides a comprehensive framework for cloud governance and security controls. It compliments other standards, such as ISO 27001. Certification ensures that cloud security risks have been identified and re-mediation strategies put in place.
