

EiQ's API

Real-time risk intelligence.
Seamless integration.

Integrate EiQ's proprietary risk intelligence directly into your procurement systems — no toggling, no delays. Just real-time insights, right where decisions happen.

About EiQ's API

EiQ's API service offers comprehensive, real-time risk indices and detailed risk intelligence from our EiQ platform by seamlessly integrating with widely used ERP, Supplier Relationship Management (SRM), and procurement platforms, including SAP, Oracle, SAP Ariba, Coupa, and Jaggaer.

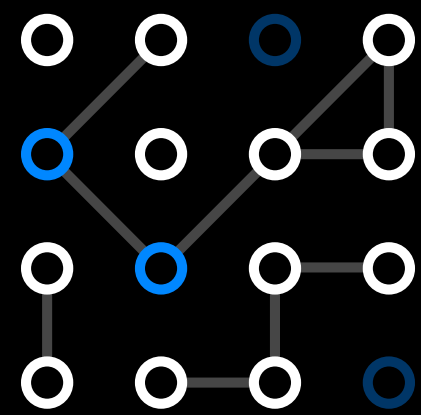

By connecting our industry-leading proprietary risk datasets, developed from millions of audit data points and trusted global sources, with client systems, API empowers customers to bypass the complexity of disparate data sources and gain clear, concise and practical risk insights instantly. Our API is designed specifically for corporate clients in industries such as food & beverage and apparel who seek more granular, timely and actionable insights into supplier, product and geography-level risks within their supply chains.

Plug EiQ data into existing control towers, task managers or ERP dashboards

Surface supplier risk, historical data and media alerts alongside core KPIs like perfect order rate, lead time and SLA compliance

Centralise risk intelligence that adapts to your internal systems

The challenge

Fragmented data sources across industry systems.

Many brands and retailers face challenges navigating overloaded and fragmented supply chain risk data ecosystems. This roadblock often leads to fragmented data and inefficient risk management approaches. Businesses currently operate across multiple siloed systems, toggling between ERP, EiQ Analyse, OMS, and Excel - each functioning independently. Information extraction is restricted to manual exports (PDFs, spreadsheets), which creates operational bottlenecks.

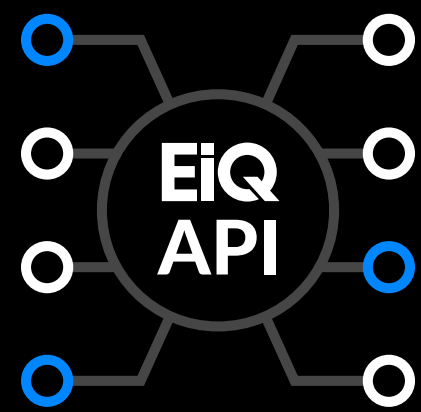

Data reconciliation is:

- ✗ Labour-intensive and non-scalable
- ✗ Prone to errors and inconsistencies
- ✗ A barrier to timely, data-driven decisions

This fragmented approach results in delayed insights, reduced agility and strategic inefficiencies.

The solution

Seamless and
secure integration
with EiQ API.

Our API addresses these challenges by combining proprietary risk scores and indices - covering social, environmental and compliance risks for products, geographies and suppliers- with direct integration to clients' existing platforms. This enables informed sourcing, risk prioritisation and supply chain diversification decisions that enhance operational resilience and ethical compliance.

EiQ's API eliminates the friction of manual data handling by enabling secure, real-time data exchange between EiQ and client systems. With our API, businesses can transform fragmented workflows into a connected, intelligent ecosystem, empowering proactive risk decisions and real-time visibility of supplier risk data.

Use cases

The API supports specific, actionable tasks for procurement, portfolio and sourcing managers, such as:

- Extract supplier risk exposure and risk management data into internal systems for centralised analysis
- Receive adverse media alerts for suppliers directly in ERP —no manual exports, no platform switching
- Making data-driven decisions to expand into new markets or rationalise sourcing
- Proactively identifying and mitigating risks to reduce supply disruptions
- Integration with third party systems such as MDG, SEDEX, SLCP, Sayari, OSH to upload supplier data into EiQ

EiQ risk intelligence: About the data

EiQ sets itself apart from the industry standard through an unrivaled dataset. EiQ risk intelligence gives you visibility and confidence to manage risk and enables effective, data-driven decisions.

What's in the data?

With EiQ's API, you'll have access to EiQ's proprietary risk intelligence – directly in your system. This includes:

EiQ supply chain risk ratings

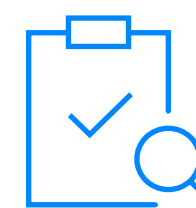

Risk scorecards for:

- 200+ global sourcing countries and provinces
- 500+ products and commodities
- Individual suppliers tailored to your specific supply chain

Supplier assessments/historical audit data

View audit reports, outcomes, findings and risk analysis of your supplier base.

Adverse media alerts

Real-time alerts for incidents detected in media associated with your supplier base:

- Upload your supplier info
- Receive alerts every other week when new instances pop up from ongoing media scans

EiQ detects instances such as factory fires, forced labour flags, workplace injuries, harassment issues and more.

With EiQ data, businesses can receive:

- ✓ Real-time risk visibility across multi-tier supply chains
- ✓ In-depth analysis of your supply chain's vulnerabilities and risk exposure
- ✓ Custom dashboards powered by verified data streams
- ✓ Scalable integration with procurement, audit and sustainability systems

Frequently asked questions

Q | Why did you build this API?

A | Many clients face complex and dynamic supply chain risks that require fast, tailored insights integrated into their existing workflows. Our expertise and proprietary data allow us to deliver precise risk intelligence that supports diverse industry needs efficiently.

Q | Can I get risk insights on my specific suppliers?

A | Yes. The API provides risk information on suppliers within our database linked to thorough compliance assessments. If a supplier is not in the database, the system provides product- and country-level risk insights.

Q | How accurate is the data?

A | We use high-quality, validated audit data from over 30,000 annual audits combined with reputable third-party sources, ensuring reliable and current risk assessments.

Q | Do I need special technical skills to use it?

A | No! The API is designed to integrate with common ERP, SRM and procurement platforms, enabling seamless access to risk data within familiar interfaces without requiring end users to have technical expertise.

Q | How often is the data updated?

A | Our risk indices are updated at least twice annually, with continuous expansion of dataset coverage and granularity.

Q

Where can I access the API?

The API is accessible via direct integration with client systems after onboarding and authentication.

A

Q

How secure is my data?

We employ industry-leading encryption and security protocols to ensure prompt and client data confidentiality.

A

Q

How is this solution different?

Unlike generic risk platforms or public LLM-based tools, our API is backed by a decade of proprietary audit history and globally sourced, multi-product risk data, delivering unparalleled depth and precision.

A

Pricing and availability:

Currently in pilot phase with early access available. Pricing details will be shared upon inquiry.

About EiQ

EiQ is the leading supply chain intelligence solution designed to help businesses achieve total supply chain confidence through data-driven insights. Through artificial intelligence, proprietary data and robust analytics, EiQ empowers businesses to conduct end-to-end supply chain due diligence, manage their most critical sustainability risks and drive impact. With EiQ, companies can monitor their supply chain performance in real time to achieve regulatory compliance, enhance supplier visibility and promote effective, data-driven decision making.
